

TRANSFER METHOD

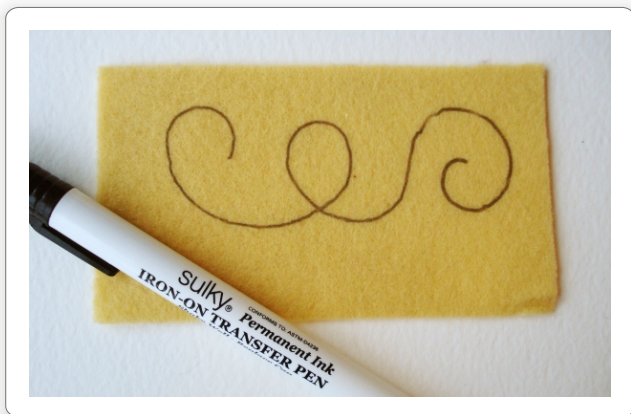

IRON-ON TRANSFER PEN

We found that the Sulky Iron-On Transfer Pen worked very well on felt. The only caution is that you need to lightly press on the pen or you will get a thick line that might not get completely covered with your embroidery floss. You will also need different colored pens for light and dark felt. And for this method you *will* need a reverse/mirror image of your pattern/design.

HOW IT WORKS:

While the pen will come with instructions, the basic idea is that you print out your pattern (the mirror image) on regular printer paper, trace over the image right on the ink on the paper, flip this down on your felt, and iron it on. The image is then clearly on your felt for you to stitch over. Below we show you how this method looks.

The image has been ironed onto the felt

The transferred image is covered nicely with embroidery floss
